**Make It Now**

If you choose to use a 'Make It Now' project, simply click on the project you want to make. You will come to a details page that will give a brief description of the project, list the materials needed, show the project resources from Design Space needed, and give instructions for completing the project. If you like the project as is, click the green 'Make it Now' button and follow the on-screen prompt for cutting the project.

You can also customize the project using the 'customize' button. This will load a design mat with the pre-made project, and you can make changes to the project in design space. Using design space and some design techniques will be discussed in more detail later in the guide. Once you are finished designing the project, click the green ‘Go’ button, and follow the instructions to cut the project.

Once you have finished cutting the project, return to the details page to see the instructions for finishing and assembling the project.
